TECHNOLOGY  Since 1975

The RMIZ-NHBU...M2M3/M3M4 series are centrifugal lift-off sprag type freewheels, where the inner race is the only component designed for freewheeling. These units are self-contained and specifically designed for backstop applications. It's important to ensure the overrunning speed meets or exceeds the minimum specified in the table, especially when using a variable speed drive. These units come equipped with M-type covers, which include grease pockets and contact-free seals.

EXPERIENCE. EXPERTISE. EXCELLENCE.
